Earthheart's Do-It-Yourself Complete Yard Care Program includes everything you need to get your lawn and landscape in top condition.

Why pay high prices to a lawn service when you can easily do it yourself?

Yes, with this easy program, you can take control of your complete landscape.

It's set up so anyone can do it...young, old, male or female. Follow the simple, easy steps and watch your landscape flourish and grow.

You will:

- have a greener lawn
- your trees and shrubs will grow faster and fill out
- your flowers will have big, beautiful blossoms
- no more insect problems bothering you or your plants
- no more critter problems

We use ingredients of all natural sea kelp, plus special humates to complete the formula. This special blend makes for the finest plant food available, with no fillers. We don't use chemicals to force plant growth.

The Deep Root Feeder

The easiest & most efficient way to water, fertilize and care for your trees, shrubs, flowers, vegetables and plants.

Lightweight, yet durable tube steel construction; this gardening tool is so easy to use.

Easily insert the steel probe up to 14" in the ground and turn on the water; it's that easy. The 8 water jets inject the water directly to the root zone; no more waste, run-off or erosion.

The only way to water during droughts and water restrictions. Caring for trees and other landscape plants has never been easier.
