

Earthheart™ Tank Feeding System

Earthheart™ Products for Pest Control

Earthheart™ All Purpose Insect Spray

This product is very effective as an insecticide but harmless to warm blooded creatures. Made from synthetic permethrin, it is a systemic product and can

be applied at full strength or diluted. Use as a spray or mix with any Earthheart™ plant food.

Earthheart™ Organic Fence

Earthheart™ Organic Fence is a harmless organic barrier to protect your lawn and plants from unwanted visitors. Anywhere that Earthheart™ Organic Fence is sprayed, animals stay away, with no harm to them, because it's organic!

Earthheart™ Tank Feeding System

Earthheart™ Tank Feeding System

Earthheart Tank Feeding System for slow, continuous lawn and turf feeding. It's as easy as 1..2..3...

1. Install system by hooking up to your irrigation system.
2. Fill tank with Earthheart™ Grass and Turf plant food.
3. Connect system to irrigation lines and set flow adjustment

Now, just water your grass as needed and the tank will feed your lawn in small amounts each time you water. This system is a slow feeding system and will give your grass a more even feeding, which will create a healthier turf that is stronger and more disease and insect resistant.

- Canister has a dial so you can increase feeding as needed, depending on your soil conditions.
- No mechanical parts to break down.
- No electricity needed, it operates under water pressure only.
- Easy hook-up to your sprinkler system...then relax and enjoy looking at your beautiful lawn!

Earthheart™ Products for Lawns and Turf

Earthheart™ Grass & Turf 28-0-4 Phosphorus-Free

This grass and turf food stimulates quick greening with long-lasting results. It releases nitrogen slowly, as the grass needs it, so there's no surge growth to cause extra mowing and extra clippings. This turf and grass food is made with all natural sea kelp, but with no phosphorus. Many areas of the United States have a lot of phosphorus already. Adding more to the ground can be very harmful to ground water and lakes. This natural grass and plant food, being phosphorus free, takes advantage of the phosphorus that is already in the soil as it's second important component. Outdoor grass & turf thrive on this, in areas with phosphorus rich soil.

Earthheart™ Grass & Turf 28-3-3

Grass loves ammonium sulfate which is an efficient source of nitrogen, an essential nutrient for photosynthesis and green color. We use ingredients of all natural sea kelp, plus special humates to complete the formula. This special blend makes for the finest plant food available, with no fillers. We don't use chemicals to force grass and turf growth. Each application of only 1 pound per 1,000 sq. ft. makes it easy to use.

The Four Basic Effects of Sea Kelp
